

CreaseMatic 150

Programmable Card Creaser

The CreaseMatic 150 programmable hand fed card creaser creates quality creasing and perforating on all types of digitally printed work. The rise and fall platen creasing action enables positive accurate creasing on stock 400gsm at over 2000 per hour. A location program memory with a quick and easy setup of up to 9 creases per sheet is standard.

Built in perforating wheel which is easily engaged for in-line perforating.

Programming and operation is controlled from an easy to use control panel.

Accommodate sheet sizes up to 33 inches wide.

2 reversible crease bars allows different crease widths to be set according to thickness of stock.
